

1. Which are the top three variables in your model which contribute most towards the probability of a lead getting converted?

Ans: The top three variables contribute most towards result:

- Lead Source from Welingak Website
- Lead Source from Reference
- What is your current occupation is Working Professional

2. What are the top 3 categorical/dummy variables in the model which should be focused the most on in order to increase the probability of lead conversion?

Ans: The top three variables contribute most towards result:

- Lead Source from Welingak Website
- Lead Source from Reference
- What is your current occupation is Working Professional

3. X Education has a period of 2 months every year during which they hire some interns. The sales team, in particular, has around 10 interns allotted to them. So during this phase, they wish to make the lead conversion more aggressive. So they want almost all of the potential leads (i.e. the customers who have been predicted as 1 by the model) to be converted and hence, want to make phone calls to as much of such people as possible. Suggest a good strategy they should employ at this stage.

Ans: Phone calls must be done to people if

- They spend a lot of time on the website, which may be increased by making it engaging and keeping them coming back.
- They can be observed frequently returning to the website.
- Their most recent communication was via SMS or Olark chat.
- They're employed professionals.

4. Similarly, at times, the company reaches its target for a quarter before the deadline. During this time, the company wants the sales team to focus on some new work as well. So during this time, the company's aim is to not make phone calls unless it's extremely necessary, i.e. they want to minimize the rate of useless phone calls. Suggest a strategy they should employ at this stage.

Ans: They should concentrate more on alternative strategies in this situation, such as automated emails and SMS. Calling won't be necessary unless it's an emergency this way. The aforementioned tactic can be applied, but only with clients that have a very significant likelihood of purchasing the course.
